

Audit Logs

Preserve the integrity and reliability of digital evidence.

Transaction-Based Audit Logs are a tool that securely tracks and records the movement of all digital evidence in CivicDocs. These audit logs create an automatic chain of transactions, documenting who handled it, when, and why—essential in prosecution and investigative contexts for establishing evidence reliability.

Detailed audit logs are created for all parties, adding verification and maintaining transparency throughout the prosecution process and aiding in compliance with state and federal discovery laws. Read more below on how CivicDocs's audit logs can better safeguard your digital evidence.

Core Benefits

Enhance Security and Accountability

- Maintain detailed records of all interactions with digital evidence.
- Demonstrate compliance with data protection and privacy regulations.

Ensure Integrity and Reliability

- Prevent tampered files through detecting technology.
- Track the access of third parties in the software, such as law enforcement and defense attorneys.

Monitor Document Access

- Reduce unauthorized access risks with advanced user-based settings.
- Monitor personnel access via IP address and other features.

Improve eDiscovery

- Prevent tampered files through detecting technology and versioning.
- Track the dates and times files were received, opened, and/or downloaded.
